AUTOCARE

UI / UX DESIGN DOCUMENT

Every screen, component and flow of the platform.

A complete guide to the AutoCare website design (version 2): the design system, site map, user flows, all seven screens, every modal, states and responsive rules.

01 · INTRODUCTION

Product overview

AutoCare is a bilingual (Arabic and English) web platform that connects three groups of people around one goal: keeping cars healthy. Owners keep a **digital garage**, log their odometer and let the system warn them before the oil or brakes become a problem. They then **book a certified workshop** and keep a permanent record of every invoice. Workshops receive and manage bookings, and admins oversee the whole network.

7	8	4	2	2
Views / screens	Modal dialogs	User roles	Languages	Themes

1.1 Who uses it

Role	Main goals	Where they work
Visitor (guest)	Understand the service, see prices and top-rated centers, then sign up or open the garage.	Landing page, About page, Login, Sign-up
Car owner	Track mileage and oil life, find a center, book, rate the visit, and review every expense.	Owner app: My cars, Centers & booking, Bookings, Expenses
Service center	Receive requests, accept or reject with a reason, deliver the car and issue the invoice, manage opening hours and capacity.	Center panel, Join-as-center modal
Admin	Watch network growth, resolve complaints, approve or decline new workshops.	Admin dashboard

1.2 Design principles

- **Fresh and clean.** A deep navy canvas with sky-blue and cyan accents (the "Fresh Car Wash" palette) keeps the product calm and modern.
- **Arabic first, English always.** Arabic is the default (right-to-left). One tap switches the whole interface to English (left-to-right).
- **Transparent by default.** Upfront starting prices, verified reviews after real bookings, and an expense ledger nobody can delete.
- **One clear action per card.** Every card ends in a single primary button (Book now, Accept booking, Deliver & invoice).
- **Instant feedback, any screen.** Every action answers with a toast, a badge change or a new number, and grids, tabs and the navbar adapt to phones.

1.3 Scope of this document

This document describes the design in **UI-UX-version2.html**: visual language (2), navigation and flows (3 and 4), every screen (5), modals (6), states (7), responsive rules (8), suggestions (9) and the team handoff (10).

> **Good to know**
> The design is a working HTML prototype that stores its demo data in the browser. The sample data it ships with (two cars, three centers, two bookings, three expenses) is reused in this document so you can match screens to numbers.

02 · VISUAL LANGUAGE

Design system

2.1 Colour palette (dark theme, default)

	Name	Token / hex	Where it is used
	Background	`--bg` `#0F172A`	Page canvas, header base, hero overlay
	Deep background	`--bg-deep` `#080D1A`	Role bar, phone frame, tab rail, inputs in wireframes
	Surface	`--sf` `#142037`	Cards, KPI tiles, modals, alternating section bands
	Surface 2	`--sf2` `#1E2F4D`	Toasts, odometer box, table header, ghost buttons, tags
	Line	`--ln` `#243C63`	Every 1px border and divider, progress-bar track
	Text	`--tx` `#F0F9FF`	Headings and primary text
	Muted	`--mu` `#94A3B8`	Descriptions, labels, secondary text
	Deep blue	`--rd` `#1D4ED8`	Gradient start/end for buttons, strip, CTA banner
	Sky blue (accent)	`--rd2` `#38BDF8`	Links, ratings, active states, highlights, glow
	Water cyan	`--cyan` `#22D3EE`	Kicker text, odometer value, "Join as center", tags
	Success green	`--gn` `#10B981`	Completed status
	Warning amber	`--warn` `#F59E0B`	Pending status
	Danger red	`--danger` `#EF4444`	Rejected status, delete, oil-life warning bar

2.2 Light theme overrides

The same tokens are redefined when the user presses the theme button (data-theme="light"). Layout, spacing and components never change, only colours do.

	Name	Token / hex	Where it is used
	Background	`--bg` `#F0F9FF`	Page canvas
	Deep background	`--bg-deep / --sf2` `#E0F2FE`	Role bar, tags, odometer box
	Surface	`--sf` `#FFFFFF`	Cards, modals, header (97% white)
	Line	`--ln` `#BAE6FD`	Borders and dividers
	Text	`--tx` `#0F172A`	Headings and body
	Muted	`--mu` `#475569`	Secondary text
	Sky (accent)	`--rd2` `#0284C7`	Darker for contrast on white
	Cyan	`--cyan` `#0891B2`	Darker for contrast on white

2.3 Gradients and effects

Name	Definition	Used on
Primary gradient	135deg, sky #38BDF8 to deep blue #1D4ED8	Primary buttons, active role-bar and tab pills
Strip / CTA gradient	Deep blue #1D4ED8 to sky #38BDF8	Stats strip (horizontal), bottom CTA banner (135deg)
Nav underline	90deg, sky to cyan, 2px, grows from 0 to 100% on hover	Header navigation links
Heading highlight	90deg, cyan to sky, applied to the word with clipped text	Last line of the hero title
Progress bar	90deg, deep blue to sky (turns solid red at 85% or more)	Oil-life bar on vehicle cards
Hero overlay	260deg, navy at 97% to transparent	Fades the hero illustration behind the text
Glow shadow	0 4px 14px blue at 30%; hover 0 6px 20px sky at 40%	Buttons; phone mockup uses a larger sky glow

2.4 Typography

Two Google fonts are used, both with full Arabic and Latin coverage. Fallback stack: `Cairo, Tajawal, system-ui, sans-serif`.

Role	Font / weight	Size	Notes
Logo "AUTOCARE"	Tajawal 900	26px (22px under 520px)	"AUTO" in text colour, "CARE" in sky blue, always left-to-right
Hero title (h1)	Tajawal 900	clamp(42px, 7vw, 92px)	Line height 1.08; last line uses the gradient highlight
Section titles (h2)	Tajawal 900	clamp(28px, 4vw, 44px)	Followed by a 16px muted subtitle
Card titles (h3)	Cairo 800 / 900	18 to 22px	Vehicle name 20px/900, centers 18px
Navigation links	Tajawal 800	15.5px	Underline animates in 0.22s
Body text	Cairo 400 to 700	16px, line height 1.6	Muted descriptions 13 to 14px
Labels and badges	Cairo 700 / 800	12 to 13px	Badges are uppercase, 12px / 800
KPI numbers	Tajawal 900	22px	Odometer value 20px / 800 in cyan
Stats strip numbers	Tajawal 900	34px	White on the blue gradient

Note
The text in these PDFs uses Poppins because Cairo and Tajawal are not available offline. The real product must load Cairo (400, 600, 700, 800, 900) and Tajawal (500, 700, 800, 900) from Google Fonts.

2.5 Layout, spacing and shape

Token	Value	Used for
Container	max-width 1180px, centered, 20px side padding (.w)	All page sections
Header	Sticky, 70px tall, blurred 92% navy background, 1px bottom line	Every view
Grids	auto-fit, minmax(320px, 1fr), gap 20 to 24px	Center cards, vehicle cards, branch cards
KPI row	4 columns, gap 16px (3 columns on the center panel)	Owner, center and admin dashboards
Radius	8px buttons and inputs, 12px tags and boxes, 16px cards, 18 to 20px step cards and modals, 24px CTA banner, 44px phone	Everywhere
Buttons	Padding 10 x 22px; small 6 x 14px; font 14px / 800	All actions
Modal	Max width 540px, padding 28px, shadow 0 30px 70px black 60%	All dialogs
Hero height	580px (520px under 860px, 500px under 520px)	Landing

2.6 Components

Figure 12. Component specimens drawn from the design CSS

Component	Anatomy and states
Primary button (.btn)	Sky-to-blue gradient, white text. Hover: brightness 1.12, lifts 1px, sky glow. Variants: small (.sm), outline (transparent with sky border), danger (solid red).
Ghost button (.ghost)	Semi-transparent surface-2 with a line border and muted text. Used for secondary and destructive-light actions (Cancel, Dismiss, Resolve). Delete text turns red.
Input (.inp)	Label above in bold, 8px radius. Phone and email fields are forced left-to-right even in Arabic. Selects and textareas share the same look.
KPI card (.kpi)	48px rounded icon tile on the start side, small muted label above a 22px number. Hover: border turns sky and the card lifts 2px.
Vehicle / generic card	Surface background, 1px line border, 16px radius, internal flex column so the action row always sits at the bottom.
Status badge	Pill, uppercase 12px. Pending = amber, Confirmed = sky, Completed = green, Rejected = red (12% tinted fill, 30% border).
Portal tabs	Pill group on a deep rail. Active tab uses the primary gradient with a light ring. Under 640px the rail is replaced by a dropdown.
Odometer box	Surface-2 box with the label on one side and the cyan kilometre value on the other.
Progress bar	7px high track (line colour). Fill is blue gradient, red when oil life used is 85% or more.
Table	Header row in surface-2 with light-blue 13px bold text; wrapped in a scroll container on small screens.
Toast	Bottom notification, surface-2 with sky border, slides in over 0.3s. Error toasts use a red treatment.
Stars selector	5 stars, 28px, grey until hovered or selected, then gold.

2.7 Motion

- **Micro-interactions:** 0.2 to 0.25s ease on colour, border, transform and shadow. Buttons rise 1px and KPI cards 2px on hover.
- **Navigation underline:** grows from 0 to 100% width in 0.22s with a sky-to-cyan gradient.
- **Toasts:** a 0.3s slide-in (keyframes slideIn). Modals appear instantly over a dimmed backdrop.
- **Scrolling:** smooth scrolling for in-page links, with scroll padding for the safe area at the top of the screen.

2.8 Language, direction and theme

- The page starts in **Arabic, right-to-left**. The language button toggles every label, placeholder, modal and chart month name to English and flips the layout to left-to-right.

- Layout uses logical properties (inset-inline, start/end alignment) so nothing needs to be mirrored by hand.
- Numbers use Arabic-Indic digits in Arabic and Western digits in English. Currency is "EGP" in English and the Arabic abbreviation for Egyptian pounds in Arabic.
- The car name field accepts Latin letters only (it carries a pattern and title). Email, password and phone fields are always left-to-right.
- The theme button toggles dark and light; the choice changes colour tokens only.

03 · INFORMATION ARCHITECTURE

Navigation and user flows

All seven views live on a single page. The role bar at the very top (a prototype tool) and the header navigation switch between them without a reload.

Figure 11. Site map: 7 views switched by the role bar and header

3.1 Navigation elements

Label (Arabic default)	English	Goes to
كيف يعمل	How it works	Landing page, "how" section (anchor)
الخدمات	Services	Landing page, services section
المراكز	Centers	Landing page, top-rated centers section
التطبيق والعداد	App and odometer	Owner app (My cars tab)
انضم كمركز صيانة	Join as a maintenance center	Opens the Join-as-center modal (cyan highlight)
من نحن	About us	About view
فتح الكراج	Open garage	Owner app (primary header button)
تسجيل الدخول	Login	Login view (role bar)

3.2 Key user flows

Owner Service center Admin System

A. Owner: first booking

1. Sign up with name, phone, email and password
2. Add first car (make, year, km, plate)
3. Open Centers tab, search and sort
4. Press Book now and pick car, service, date, time
5. Request appears as Pending
6. Center accepts: status Confirmed
7. Center delivers and enters invoice
8. Invoice lands in expense ledger, Rate visit appears

B. Owner: smart maintenance loop

1. Owner updates odometer on the car card
2. System recalculates oil life used (km since last oil change / 10,000)
3. At 85% the bar turns red: "Service required"
4. Dashboard KPI "Maintenance alerts" counts it
5. Owner books service in a center
6. After service owner presses Oil reset
7. Bar returns to blue, counter restarts

C. Service center: handling a request

1. New request shows in the panel (KPI Pending +1)
2. Accept booking: becomes Confirmed
3. Or Reject with note: reason written for the driver
4. Rejected: driver sees the note in a red box on their Bookings tab
5. On the day: type invoice amount
6. Press Deliver and invoice: status Completed
7. Expense added to the owner ledger (category Mechanical)

D. A workshop joins the network

1. Workshop opens Join-as-center from the header
2. Submits name, area, phone, services, price, bays
3. Toast: admin will review shortly
4. Admin sees it under Join requests
5. Admin presses Approve
6. Center is added to search with its starting price
7. Owners can now find and book it

04 · SHARED ACROSS EVERY VIEW

Global layout elements

4.1 Role bar and header

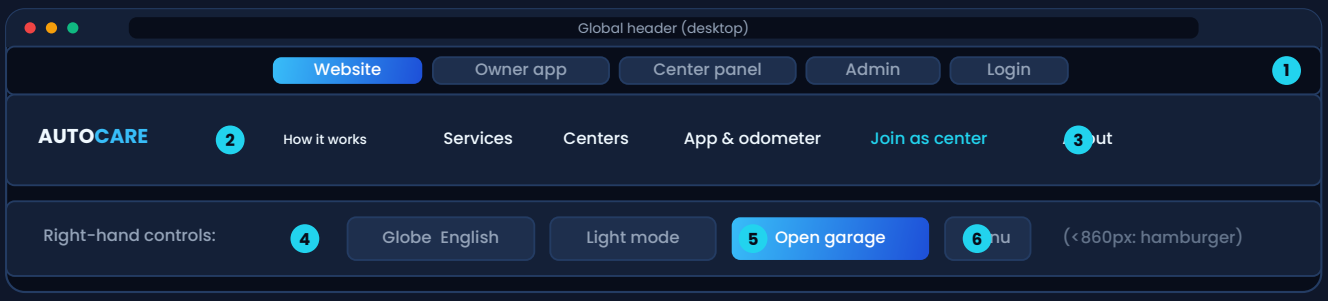

Figure 2. Role bar and header, shown on every view

#	Element	Specification	Behaviour
1	Role bar	Slim bar on the deep background with five pill buttons (Website, Owner app, Center panel, Admin, Login). Active pill uses the primary gradient.	Prototype switcher. Instantly shows the matching view and updates the active pill. In production this is replaced by real role-based routing.
2	Logo	Text only: AUTO in text colour, CARE in sky. 26px Tajawal 900. No icon.	Returns to the landing page.
3	Main navigation	Six links, Tajawal 800 at 15.5px. Hover: text turns sky and a gradient underline grows.	Anchor links on the landing page; "Join as center" is cyan and opens a modal.
4	Language button	Ghost button with a cyan label and glow border.	Switches Arabic and English, rebuilds all text and flips direction.
5	Theme button	Ghost button. Label changes between "Light mode" and its opposite.	Toggles data-theme. Hidden under 520px to save room.
6	Primary button	Open garage, small gradient button.	Opens the owner app.

Hamburger menu. Under 860px the six links collapse into a button (aria-label "Open navigation menu", aria-expanded toggles). The menu opens as a rounded surface panel under the header with large 13px-padded rows and closes after choosing a link.

4.2 Footer, toasts and modal host

Element	Details
Footer	Logo on one side, four links (About, Owner garage, Center panel, Admin) and the copyright line on the other. Wraps on small screens.
Toast stack	Fixed container (id toasts). Each message auto-dismisses; error toasts are used for blocking validation such as "Add vehicle first".
Modal host	A hidden full-screen backdrop containing one modal. openModal(title, html) fills it; the close button and Cancel buttons call closeModal().

05 · THE SEVEN VIEWS

Screen-by-screen guide

5.1 Landing page (Home)

Purpose: convince a visitor in seconds, show proof (numbers, ratings, real centers) and send them into the owner app. Sections run top to bottom in the order of the numbers below.

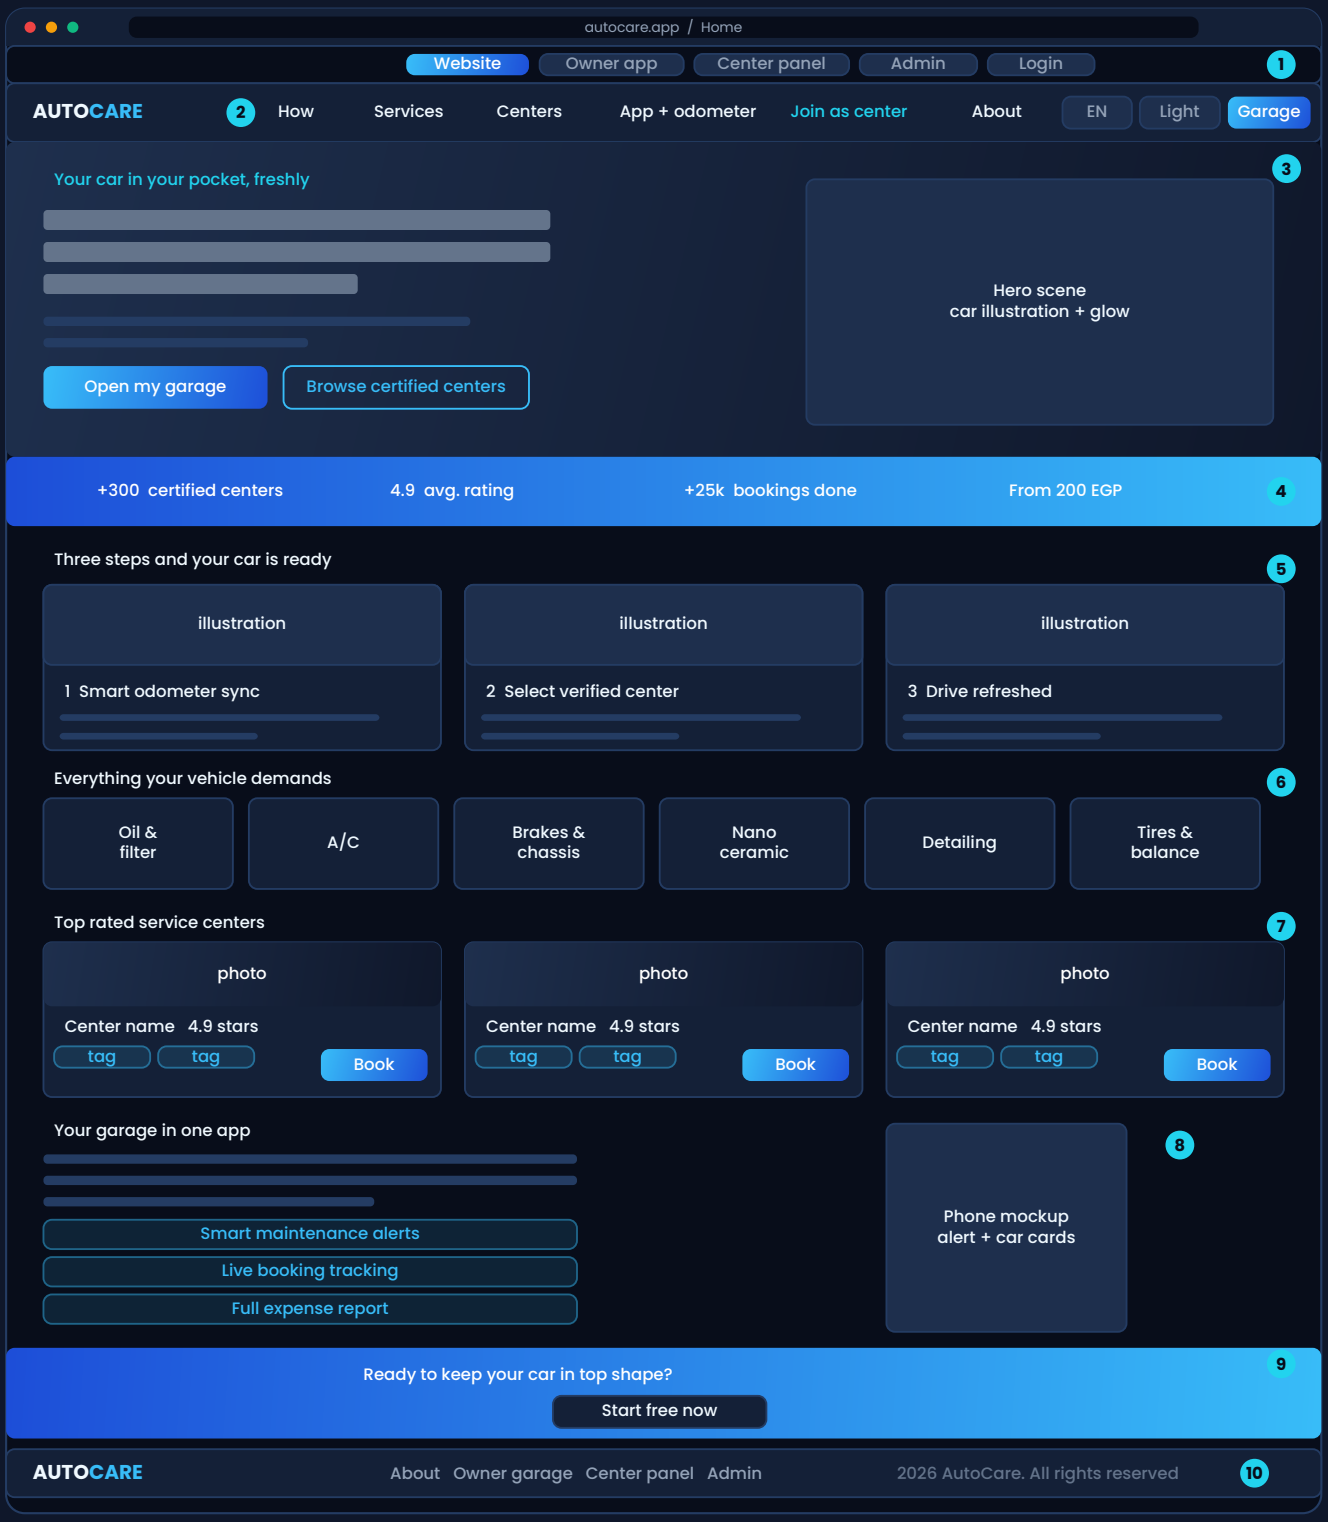

Figure 1. Landing page (view: home)

#	Element	Specification	Behaviour
1	Role bar	See 4.1.	Switches views.
2	Header	See 4.1.	Sticky while scrolling.
3	Hero	Kicker in cyan: عربيتك في جيبك بتقنية منعشة. Title: اهتم بعربيتك. احجز. وانطلق بانتعاش. with the last line in the gradient. Short description, then two buttons: Open your garage (primary) and Browse certified centers (outline). Illustration of a car on the end side; text fades into it with the hero overlay.	Button 1 opens the owner app. Button 2 opens the owner app already on the Centers tab. Height 580px.
4	Stats strip	Full-width blue gradient with four numbers: +300 certified centers, 4.9 average rating, +25k successful bookings, prices from 200 EGP.	Static. Wraps to two columns on mobile.
5	How it works	Title "Three steps and your car is ready". Three step cards with an illustration on top: **Smart odometer sync** (tracks fluids and distance), **Select verified center** (choose workshop, package, time), **Drive refreshed** (automatic digital invoice in your financial log).	3 columns, 1 column under 860px.
6	Services	Surface-coloured band, title "Everything your vehicle demands". Six tiles: Oil & filter, Air conditioning, Braking & chassis, Nano ceramic lab, Detailing & care, Tire geometry & balancing; each with an illustration and one-line description.	6 columns, 2 columns on small screens.
7	Top-rated centers	Title "Top rated service centers". Cards with a scene image, name, rating, area, tags and starting price (same card as in the Centers tab).	Auto-fit grid, min 320px. Book now leads into the owner app.
8	App mockup	Left: title "Your garage in one app" and three highlights (smart maintenance alerts, live booking tracking, complete expense report) plus a "Try the owner garage now" button. Right: a phone frame with a red-edged alert ("Time to change your BMW oil soon!") and mini car cards that mirror real garage data.	Two columns, stacked under 860px. Phone has a 10px bezel and sky glow.
9	Bottom CTA	Rounded 24px banner on the blue-to-sky gradient: "Ready for precision vehicle upkeep?", sub-line about adding a first vehicle in 30 seconds, dark button "Start garage now".	Opens the owner app.
10	Footer	See 4.2.	

States and edge cases:

- The phone mockup updates when the garage changes (syncPhoneMockup), so adding a car or updating the odometer is visible on the landing page too.
- If no car is close to an oil change, the alert in the phone shows its calm state rather than the red warning.
- Hero text keeps a start alignment so it hugs the right edge in Arabic and the left edge in English.

5.2 Owner app (My garage and bookings)

Purpose: the owner's daily workspace. It has a title, a four-tab navigation, a row of four KPI cards and one panel per tab. On phones the tabs become a dropdown (aria-label "Garage menu").

Tab 1: My cars

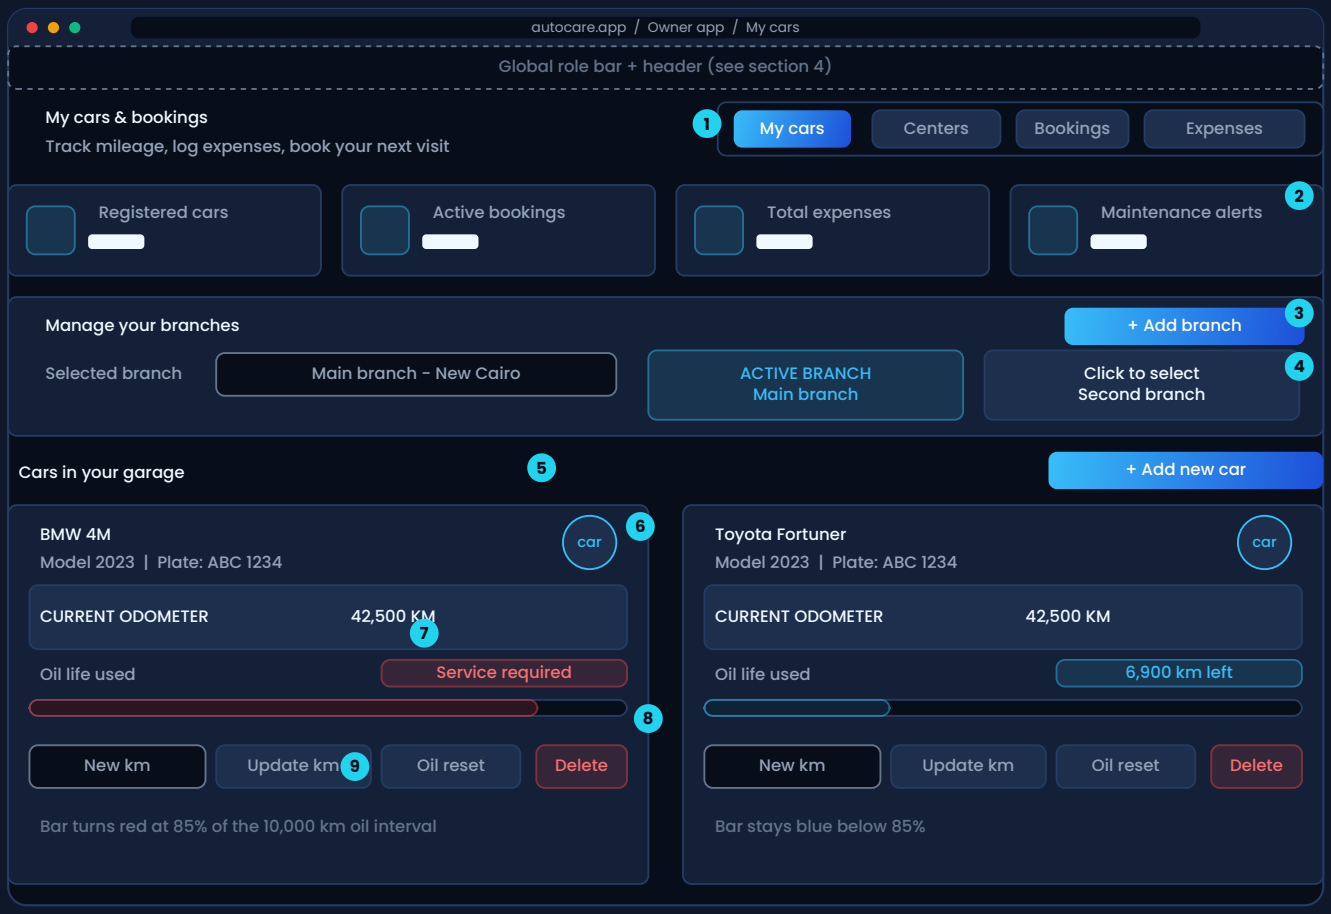

Figure 3. Owner portal, tab "My cars"

#	Element	Specification	Behaviour
1	Page header	Title "My cars & bookings" and a one-line subtitle.	
2	Tabs	My cars, Centers & booking, Bookings, Expense log. Active tab shows the gradient pill.	Switching hides one panel and shows another; the dropdown mirrors it on mobile.
3	KPI row	Four cards: registered cars, active bookings, total expenses (EGP), maintenance alerts (shows "None" when zero).	Recalculated after every change.
4	Branch manager	Card with title, "Add branch" button, a branch dropdown, a summary line (area, address, phone) and a grid of branch cards. The selected card has a 2px sky border and the label "ACTIVE BRANCH".	Add branch opens a modal. Clicking a card selects it and shows a toast. Empty state: "No branches yet. Add your first branch."
5	Garage header	Title "Cars in your garage" and the "Add new car" button.	Opens the Add-vehicle modal.
6	Vehicle card	Name (20px/900) with model year and plate, car icon, odometer box, oil-life row and progress bar.	Oil life used = (km minus km at last oil change) / 10,000 km. Under 85%: shows km left. 85% or more: red "Service required" and a red bar.

#	Element	Specification	Behaviour
7	Controls row	Number input "New km", Update km, Oil reset, and Delete at the far end.	Update km refreshes the bar and toasts "Odometer updated". Oil reset toasts "Oil counter reset". Delete asks "Remove vehicle?" first.

Empty state: "No vehicles in your garage." centered in muted text across the grid.

Tab 2: Centers and booking

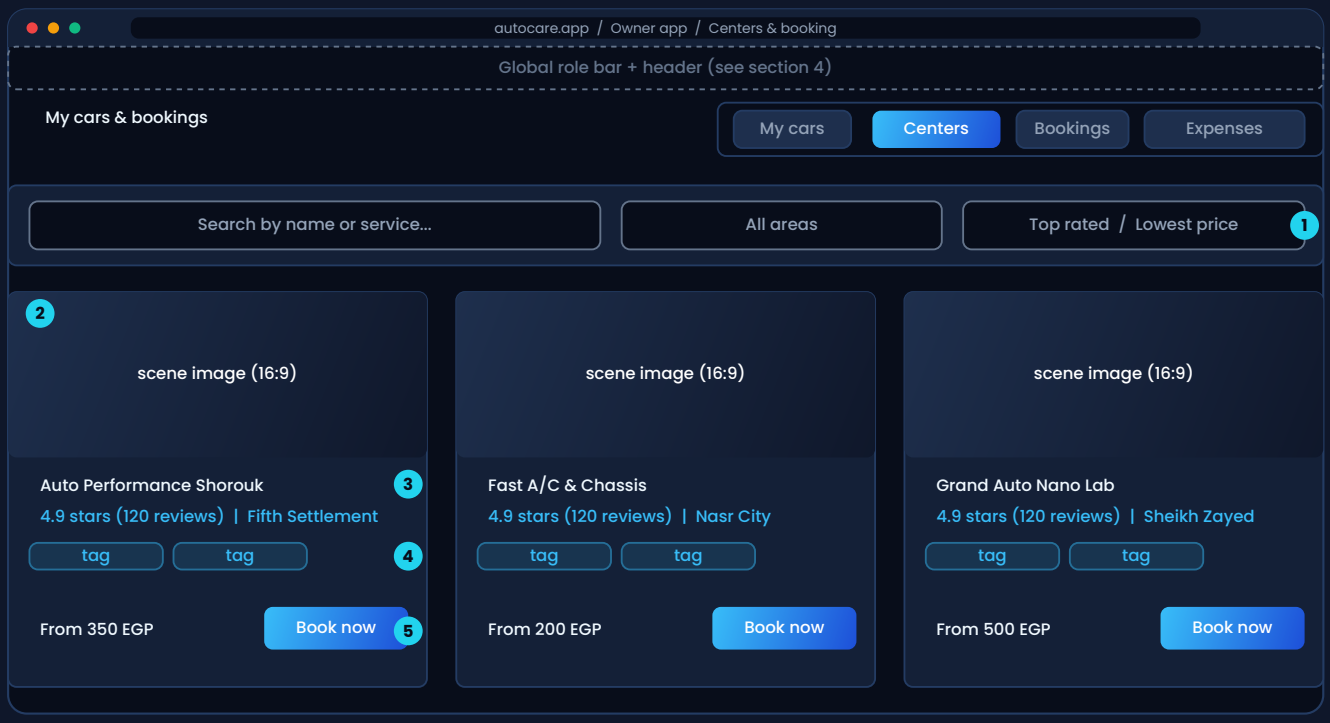

Figure 4. Owner portal, tab "Centers & booking"

#	Element	Specification	Behaviour
1	Filter bar	Surface card with three controls in an auto-fit grid: a search box (name or service type), an area dropdown (all areas, Fifth Settlement, Nasr City, Sheikh Zayed) and a sort dropdown (highest rated / lowest price).	Results redraw on every keystroke or change.
2	Center card	Overflow-hidden card. Top: 16:9 scene illustration. Body: center name, sky rating with review count and area, service tags in cyan on surface-2.	Hover lifts the card.
3	Rating row	Example: 4.9 (120 reviews) in Fifth Settlement.	Rating changes when owners rate visits.
4	Tags	Up to three pills such as routine service, computer diagnostics, wheel alignment.	Searchable.
5	Price and action	Footer separated by a line: "From 350 EGP" and the Book now button.	Opens the booking modal. If the owner has no car yet: error toast "Add vehicle first".

Empty state: "No centers found." when no center matches the filters.

Tab 3: Bookings

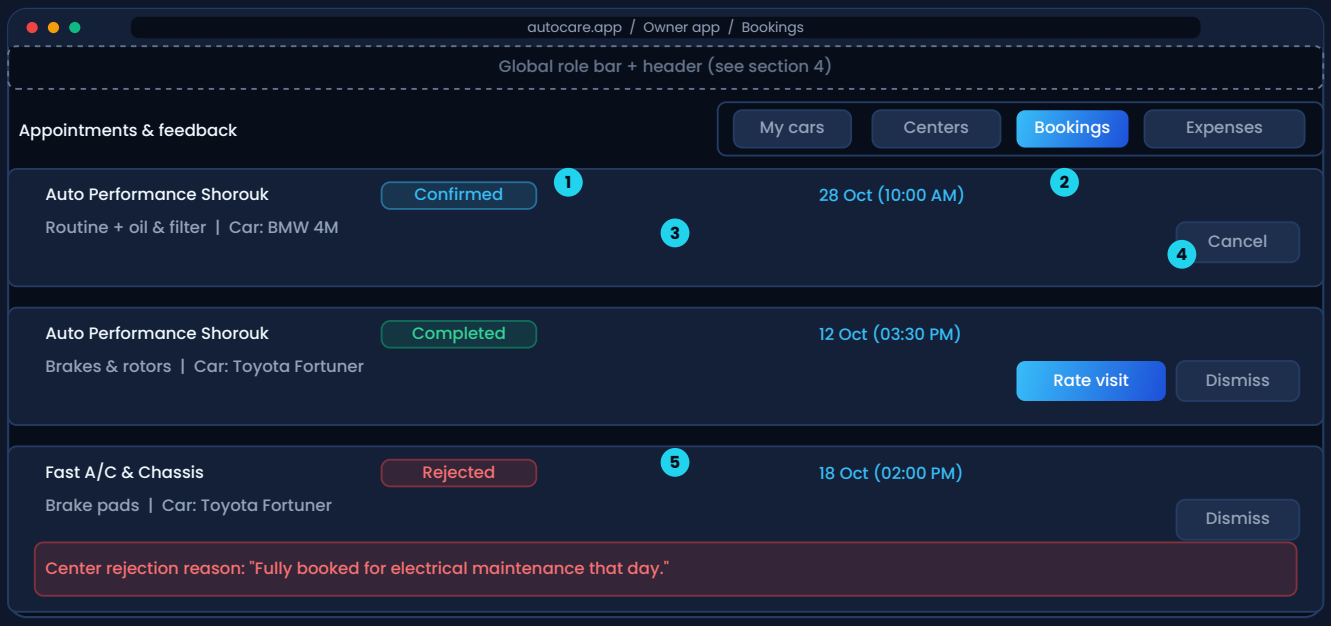

Figure 5. Owner portal, tab "Bookings" (three booking states)

#	Element	Specification	Behaviour
1	Booking title	Center name with a status badge (Pending, Confirmed, Completed or Rejected).	Badge colours come from the design system.
2	Status badge	Pending = amber, Confirmed = sky, Completed = green, Rejected = red.	Arabic labels: under review, confirmed, service done, rejected.
3	Details	Service, car name and the date with time.	
4	Actions	Pending or Confirmed: Cancel. Completed and unrated: Rate visit button (becomes a "4/5" label after rating). Completed or Rejected: Dismiss.	Cancel and Dismiss remove the booking from the list and toast "Booking removed".
5	Rejection note	Red-tinted box titled "Center rejection reason" quoting the center's message.	Only when the status is Rejected and a note exists.

Tab 4: Expense log

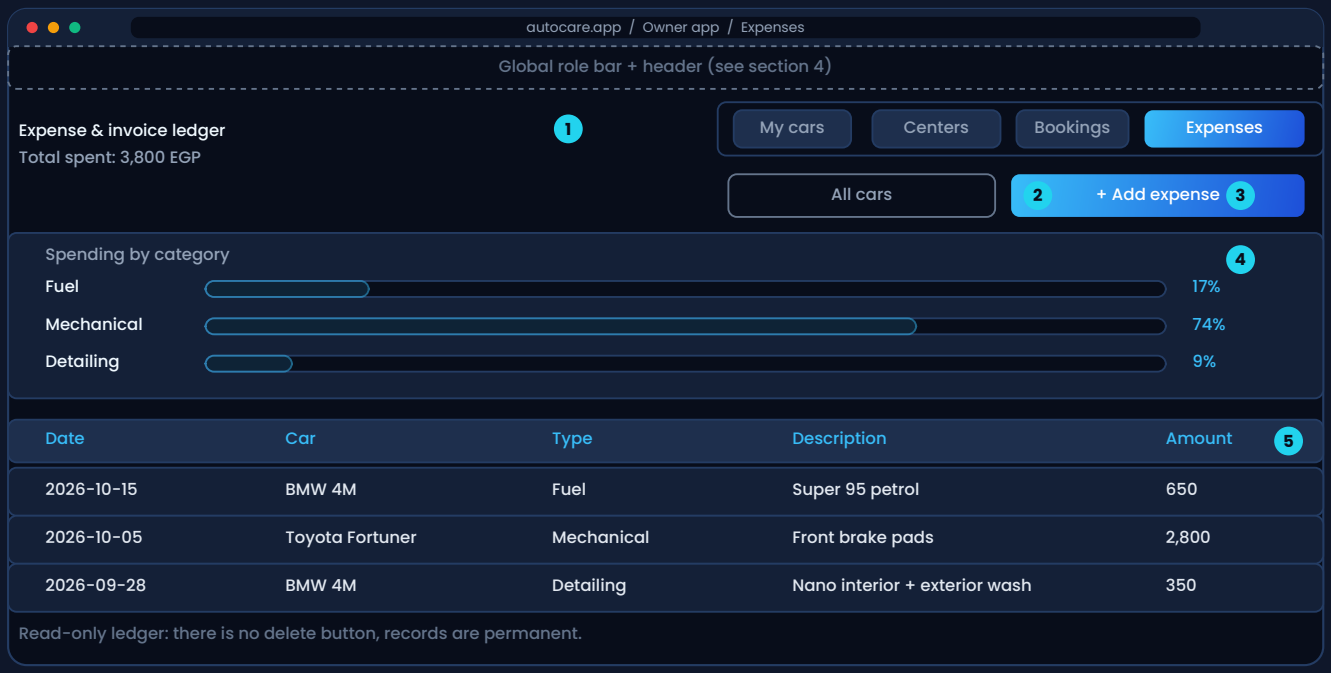

Figure 6. Owner portal, tab "Expenses"

#	Element	Specification	Behaviour
1	Header	Title "Expense and invoice log" with the running total "Total spent: X EGP".	Updates with the filter.
2	Filters and add	Car dropdown (all cars by default) and the Add expense button.	Add expense opens a modal. If the owner has no car: error toast "Add a car first".
3	Category bars	Surface card with one progress bar per category and a percentage of the total.	Categories: Fuel, Mechanical, Detailing and care, Insurance and fees.
4	Table header	Date, Car, Type, Description, Amount, in the surface-2 header style.	Scrolls horizontally on small screens.
5	Rows	Newest first. Invoices issued by centers appear here automatically with category Mechanical.	The ledger is permanent: there is no delete control. Empty state: "No expenses recorded."

5.3 Service center panel

Purpose: let a workshop run its day: see new requests, decide, deliver and invoice.

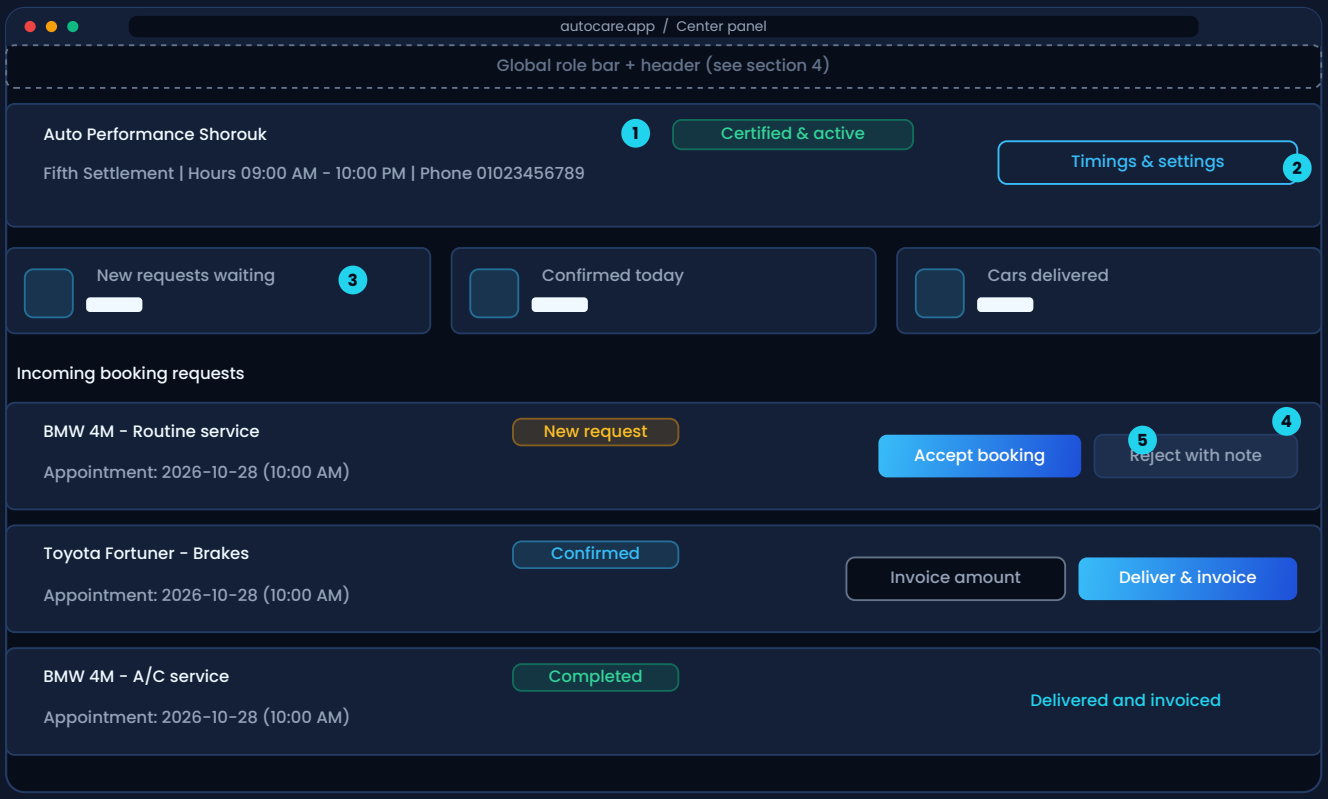

Figure 7. Service center panel (three order states)

#	Element	Specification	Behaviour
1	Banner	Card with the center name (24px), a green "Certified and active partner" badge and a meta line: branch, opening hours, phone. Right side: outline button "Timings and settings".	Opens the Center settings modal. Banner text updates after saving.
2	KPIs	Three cards: new requests waiting for confirmation, confirmed bookings today, cars delivered successfully.	Counted live from booking statuses.
3	Order card	Title "Car - service", status badge, appointment date and time, center name. If rejected, the reason shows underneath.	Actions depend on status (see next two rows).
4	Pending actions	"Accept booking" (primary) and "Reject with note" (ghost).	Accept sets Confirmed with a toast. Reject opens a modal that requires a reason.
5	Confirmed actions	Number input "Invoice amount (EGP)" and "Deliver and invoice".	Blocks with an error toast if the amount is empty or 0. On success: status Completed, expense added to the owner ledger, toast "Service completed and invoice synced".

5.4 Admin dashboard

Purpose: platform oversight. Demo numbers: 1,420 users, 48 centers, 3,890 completed bookings, 2 open reports.

Figure 8. Admin dashboard

#	Element	Specification	Behaviour
1	KPI row	Registered users, service centers, completed bookings, pending reports (4 cards).	Pending reports equals the number of open complaints.
2	Growth chart	Line chart in a card, 280px high. Sky line with a soft sky fill, cyan points, smooth curve. Axes in muted text with line-coloured grid. Six months (May to Oct): 420, 580, 790, 1,100, 1,420, 1,890. Month labels follow the language.	Redrawn on language change; legend hidden.
3	Complaints and reports	List of open items with a "Resolve" ghost button.	Resolve removes the item and toasts "Report closed". Empty state: "No complaints."
4	Join requests	List of workshops (name, area, phone) with Approve (primary) and Decline (ghost).	Approve adds the center to search (rating 4.8, tags routine care and diagnostics) and toasts "Center approved". Decline toasts "Request rejected". Empty state: "No join requests."

5.5 Login and sign-up

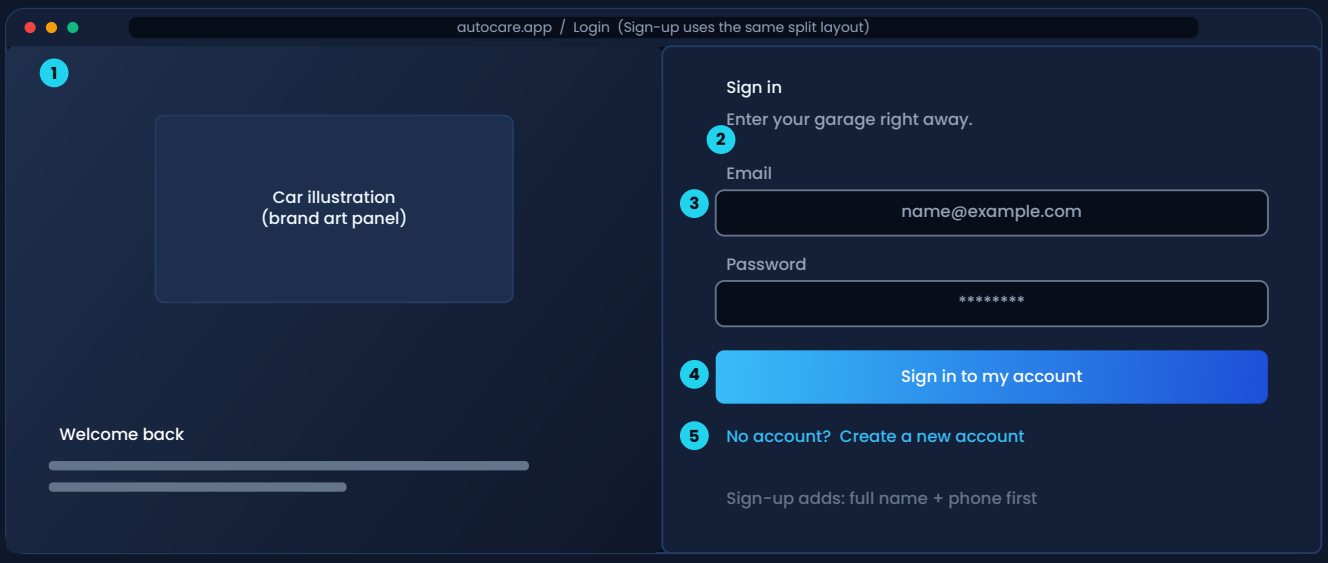

Figure 9. Authentication layout (login and sign-up)

#	Element	Specification	Behaviour
1	Art panel	Half the screen: illustrated panel with a welcome headline. Login: "Welcome back" and a line about cars, appointments and invoices. Sign-up: "Start your smart car-care journey" and a line about joining over 25 thousand owners.	Stacks above the form under 860px.
2	Form header	Login: "Sign in" with a subtitle. Sign-up: "Create a new account".	
3	Fields	Login: email, password. Sign-up: full name, phone (01xxxxxxxx), email, password. All required; email and password use left-to-right direction.	Native browser validation.
4	Submit	Full-width primary button: "Sign in to my account" or "Create account".	Toasts "Signed in! Redirecting..." or "Account created!" then opens the owner app.
5	Switch link	"No account? Create a new account" or "Already have an account? Sign in".	Moves between the two views.

5.6 About page

A short brand page reached from the header and footer. It contains a cyan kicker ("About us"), the headline "We care for your car with passion and precision", a paragraph explaining that AutoCare was built to end the chaos of service reminders and unclear prices, and three step-style cards:

Card	Message
Guaranteed price transparency	Upfront estimates before arriving at any service facility.
Vetted diagnostic quality	Genuine driver testimonials, verified after fulfilled bookings.
Autonomous records	Your service history and receipts belong to you permanently.

06 · MODALS

Dialogs and forms catalog

Every dialog uses the same shell: title row with a close button, optional intro text, fields stacked with labels above, and a right-aligned footer with Cancel (ghost) and the main action (primary, or red for destructive).

Figure 10. Modal pattern (example: booking). Dimmed backdrop, 20px radius, max width 540px

#	Element	Specification	Behaviour
1	Backdrop	Dimmed full-screen layer.	Click on close or Cancel dismisses.
2	Title row	Title (20px / 900) with an X close button.	
3	Info banner	Optional sky-tinted box for context such as operating hours.	
4	Footer	Cancel and the primary action, aligned to the end.	Primary action is a submit so Enter works.

Modal	Opened from	Fields	Result
Add branch	Owner app, branch manager	Branch name, area / city, address, phone	Branch added and auto-selected. Toast: "Branch added and selected".
Add vehicle	My cars, Add new car	Make and model (Latin letters only), year, odometer km (0 or more), plate	Car saved with oil counter starting at the entered km. Toast: "Car saved".
Book appointment	Center card, Book now	Info banner with the center hours; vehicle (from garage); service (5 options: routine + oil and filter, computer diagnostics, brakes and rotors, detailing and nano ceramic, A/C service and regas); date (today or later); time (10:00 AM, 12:30 PM, 03:30 PM, 06:00 PM, 08:00 PM)	Booking created as Pending. Toast: "Booking request submitted".
Rate visit	Bookings, Rate visit (Completed only)	1 to 5 stars (default 5), optional review text	Rating saved on the booking and added to the center. Toast: "Thank you for your rating!".
Add expense	Expense log, Add expense	Vehicle, category (Fuel, Mechanical, Detailing and care, Insurance and fees), amount in EGP (1 or more), date, description	Row added at the top of the ledger. Toast: "Expense recorded".
Decline booking	Center panel, Reject with note	Intro naming the car; reason textarea (required). Pre-filled idea: "Declined due to workshop constraints."	Status Rejected, note visible to the driver. Red button "Confirm rejection". Toast: "Booking rejected with note".
Center settings	Center panel, Timings and settings	Center name, branch, hotline, opening time, closing time, working days, bays capacity (number)	Banner updates. Toast: "Center settings updated".
Register service center	Header link "Join as a maintenance center"	Center / workshop name, location, contact phone, offered services, starting price (EGP), bay capacity. Intro: join the network and receive confirmed daily appointments.	Request goes to the admin queue. Toast: "Join request submitted! Admin will review shortly."

Note
"Remove vehicle?" is the only confirmation step. It uses a simple native confirm prompt before a car is deleted. Cancelling a booking has no confirmation because it can be re-created easily.

07 · KEEPING USERS INFORMED

States and feedback

7.1 Booking lifecycle

1. Owner submits request: PENDING (amber)
2. Center accepts: CONFIRMED (sky)
3. Center delivers + invoice: COMPLETED (green)
4. Owner rates the visit

1. From Pending the center may reject with a note: REJECTED (red)
2. Owner reads the reason, then Dismisses the card
3. Pending or Confirmed bookings can be Cancelled by the owner

7.2 Toast messages

Moment	English message	Type
Sign in / sign up	Signed in! Redirecting… / Account created!	Success
Garage changes	Branch added and selected / Car saved / Vehicle deleted / Odometer updated / Oil counter reset	Success
Booking and rating	Booking request submitted / Booking removed / Thank you for your rating!	Success
Expense saved	Expense recorded	Success
Center decisions	Booking confirmed / Booking rejected with note / Service completed and invoice synced / Center settings updated	Success
Join and admin actions	Join request submitted… / Center approved / Request rejected / Report closed	Success
Blocked actions	Add vehicle first / Add a car first / Enter invoice amount	Error (red)

7.3 Empty states

Where	Message
Garage	No vehicles in your garage.
Branches	No branches yet. Add your first branch to get started.
Centers search	No centers found.
Expenses	No expenses recorded.
Admin reports / joins	No complaints. / No join requests.

7.4 Validation rules

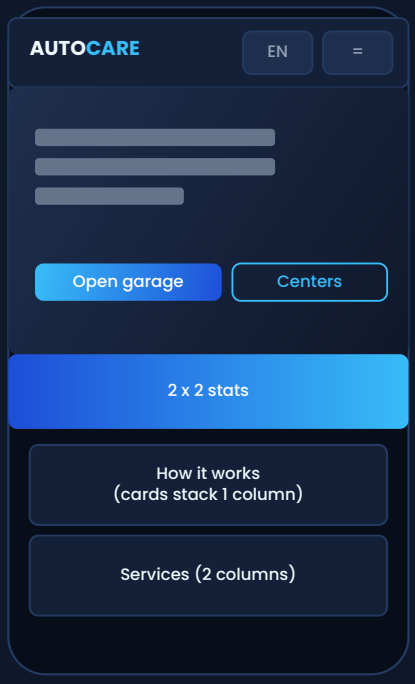

- Required fields use native browser validation; numbers have minimums (km 0+, expense 1+) and dates cannot be in the past. Car names need a Latin letter.
- A center cannot deliver a booking without an invoice amount above zero, and cannot reject without a reason.
- User-entered text is escaped before display, so names and notes cannot inject markup.

08 · QUALITY

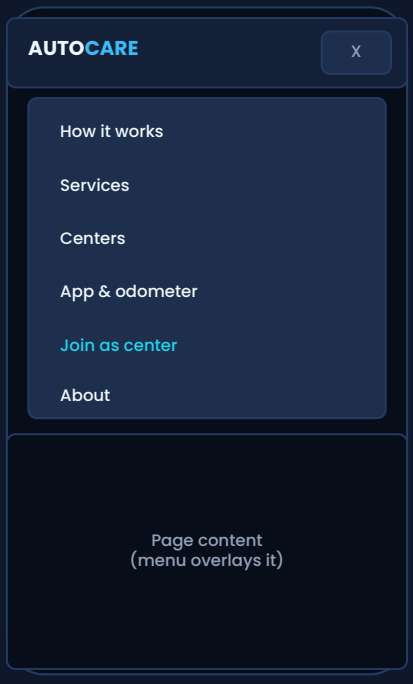

Responsive design, accessibility and language

8.1 Breakpoints

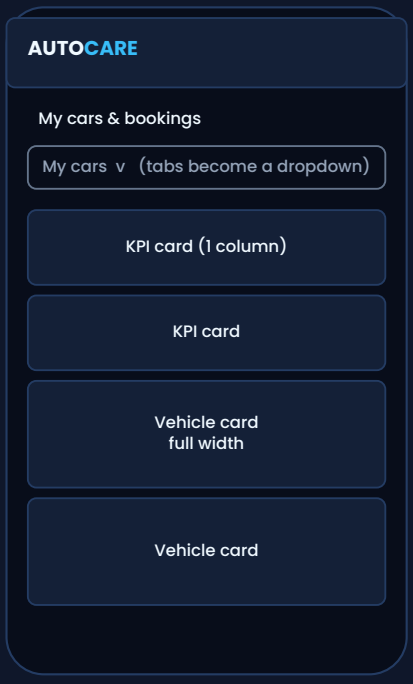

Width	What changes
Under 860px	Header navigation becomes a hamburger menu. Steps, app mockup, auth panels and KPI rows collapse to one column. Hero height drops to 520px.
Under 640px	Owner tabs are replaced by a dropdown. Role-bar pills wrap. Portal headers stack. Hero text is slightly smaller.
Under 520px	Logo shrinks to 22px, header buttons are compacted and the theme button is hidden. Hero shrinks to 500px and the title to 36 to 52px. CTA buttons get smaller padding.

Home <520px

Menu open <860px

Owner app <640px

8.2 Accessibility

- The hamburger button has an aria-label ("Open/Close navigation menu") and an aria-expanded state. The mobile garage dropdown is labelled "Garage menu".
- Dark and light themes both keep text on surfaces at readable contrast. In light mode the navigation uses darker blues so links stay legible on white.
- The page respects phone safe areas (notches and home bars) with env(safe-area-inset-*) padding.
- Interactive elements are real buttons, links, inputs and selects, so keyboard and screen-reader behaviour comes for free.
- Language and direction switch together, so reading order is always correct (right-to-left for Arabic).

8.3 Bilingual content rules

- Every user-visible string exists in Arabic and English. When translating, keep the meaning, not the word order.
- Numbers, dates and months follow the active language; currency is shown after the number.
- Sample dates are written in ISO format (2026-10-28) so they read the same in both languages.

09 · FOR THE NEXT ITERATION

Observations and suggestions

These points were noticed while reading the prototype. They are **not** part of the approved design; discuss them as a team before building.

#	Observation	Suggestion
1	The branch manager sits inside the owner "My cars" tab, but branches describe a workshop location.	Confirm the intent. If branches belong to centers, move the block to the center panel; if owners need saved locations, rename it "Saved locations".
2	Sign-in has no "Forgot password" link and sign-up has no password rules or confirmation.	Add a reset link, a show-password toggle and a short strength hint.
3	The booking time list is fixed (five slots) and ignores what is already taken or the center capacity.	Hide or disable slots that are full, using the bays capacity from the center settings.
4	The role bar lets anyone open the admin dashboard.	Replace it with role-based routing after login before launch.
5	The expense ledger cannot be corrected.	Keep it permanent but allow an "adjustment" entry so typos can be fixed with a visible audit trail.
6	The theme button is hidden on very small phones.	Move it into the hamburger menu so mobile users can still switch themes.
7	Data lives in the browser only.	Plan the backend and database early so bookings, invoices and ratings are shared between owner, center and admin.

10 · WHO BUILDS WHAT

Design-to-code handoff

Each screen maps to one folder under `src/` and one owner. See the individual task PDFs in `docs/team/` for deliverables and acceptance checks.

Part of the design	Folder in src/	Owner
Project setup, routing, global CSS tokens, login, sign-up, admin dashboard	app shell, pages/Auth, pages/AdminDashboard	Ahmed Emad (leader)
Navbar, role bar, footer, About page, toasts and modal shell, language and theme switching	components/Navbar, Footer, Toast, Modal, i18n, pages/About	Adam Akram
Landing page (hero, strip, steps, services, centers, phone mockup, CTA)	pages/Landing	Ahmed Mohamed
Owner garage: KPIs, branches, vehicle cards, odometer, expense ledger	pages/Garage	Aya Wael
Centers search, booking modal, bookings list, rating, rejection note	pages/Booking	Belal Hossam
Center panel, accept/reject/invoice flow, settings and join-as-center modals	pages/CenterDashboard	Maghfera Mostafa

Appendix: theme tokens to paste into styles/theme.css
